Psychologist: Sean Colvin, M.Sc.

How it Works:

This ADHD treatment program gives you a series of skills to manage your own ADHD. The group model uses Social Behavioural Cognitive Therapy (SBCT).

Social: You will learn skills in a group context with others who you can relate to, who will support you and encourage you.

Behavioural: To learn how to manage ADHD, you will need to make changes in your life. This group will help you learn skills and give you an opportunity to practice them both in sessions and at home.

Cognitive: Our thinking habits can help or hinder us. In this group, you will learn healthy mental attitudes and coping strategies.
